

FULL LIFECYCLE COSTING SERVICES

Ulteig is your trusted advisor throughout all stages of interconnecting project development, providing comprehensive, value-driven solutions for Power and Renewable clients. This includes renewable generation, thermal generation, storage and hyper-scale loads. Our end-to-end **Full Lifecycle Costing** services evaluation bridges the gap between technical performance and financial feasibility. Our team of resource planners and rate/tariff impact analysts collaborate to determine not only the technical output, but also the cost implications throughout the entire project lifecycle.

Unlike siloed services, Ulteig provides a dual-perspective, utility-aligned and independently validated approach to uncover hidden costs in PPAs, forecast rate impacts and support sound capital recovery strategies.

BENEFITS:

- Combines technical modeling (Ulteig utilizes the standard resource planning software, PLEXOS®, from Energy Exemplar) with cost analysis to deliver a robust source of insight for renewable project economics.
- Addresses gaps in standard PPAs by revealing hidden or overlooked costs.
- Offers a dual perspective, utility-aligned and independent analysis to support regulatory and internal decision-making.
- Shows rate and bill implications across multiple customer classes.
- Enables confident planning by clarifying long-term profitability, cost recovery and rate impact.

WHAT WE DO:

- Full lifecycle cost modeling, integrating technical and economic analysis
 - Enables clients to see the relevant costs and profitability of their projects.
- PPA gap analysis
 - Identifies PPA risks that may fail to capture full utility and development costs, offering a more complete financial forecast.
- Joint PLEXOS + cost analyst service model
 - Provides a comprehensive view of cost and performance.
- Tariff structure modeling
 - Clarifies how interconnection costs and recovery mechanisms impact the overall project.
- Side-by-side comparison of market options and rate impacts
 - Equips clients to make informed decisions based on true service costs, not just generation estimates.
